

Blue Gas Express Temporary Mobile Onsite Natural Gas Solutions

Solutions

Storage Capacity Options

Size	Therms	Scf
Cage	25	2,533
Small	80	7,910
Medium	125	13,004
Large	251	26,008
Extra Large	>251	>26,008

CNG or LNG

Service Options

- Delivery and hook-up.
- Commissioning support.
- Remote Monitoring - Fuel level
- Refueling.
- 24 hr maintenance response.

Features

- Pipeline quality gas or better.
- Connects to standard 110V outlet.
- Can also be connected to back-up generator (can be supplied by Express).
- Battery back-up.
- Meets or exceeds all NFPA onsite safety requirements.

Sample Customers

Overview: Blue Gas Express (Express) is a low-cost mobile solution for temporary onsite Natural Gas needs. The system provides a “plug-and-play” availability for customers seeking Natural Gas supply prior to utility hook-up, during maintenance of gas line or disruption of gas flow, for any reason.

Background: Express was developed by Blue Gas Marine, the award-winning developer of the only patented natural gas hybrid / Dual fueling solutions for marine engines on the market today. The same patented technology that Blue Gas Marine uses for on board fueling, storage, control and supply of Natural Gas to its marine customers, has been repurposed into a compact efficient temporary gas system that rolls up in a trailer and plugs into any conventional commercial or industrial Natural Gas intake for standard gas needs of any size quantity.

Applications: Express has been deployed in a number of different application, including:

- Natural Gas utilities needing to meet new customer delivery demands prior to building hook-up to service line. Delays in new gas hook-up can be costly to utilities and customers. Express provides an assurance that gas will be available on the date agreed, fulfills promises and eliminates the possibility that the customer might change to Propane or other form of service.
- Natural Gas utilities needing to quickly replace piped gas flow due to unexpected interruption or planned maintenance or replacing of gas lines.
- Construction firms needing building heat or process gas, prior to building delivery, to finish interior work, speed drying of paints and finishes or other. Express eliminates the need for costly, less safe, area heaters or the temporary change of present heaters to propane use.

How it works:

Express is trailer mounted and rolls right up to your site

where it is connected to the main building gas connection. The system is fully operable in minutes. Express is scalable and sized to meet your gas volume needs. Blue Gas will also refill the system, bring it back and hook it back up or train your staff to do so. Blue Gas can also supply any equipment needed for connection or assist with any gas flow or leak testing as needed on a service contract basis.
